Digi'Aware – project presentation

Training for digital awareness

DIGI'AWARE - Digital Awareness of young people to use social media safely, is a project that was launched in November 2023 about raising awareness among young people about the risks when using social media. In a world where new digital tools are developed every day, there are consequences that we only 5-10 years ago were not aware of. And even though young people have grown up with computers, smartphones and tablets they are not always aware of the dangers that they are subjected to.

Objective

The main objective of the **DIGI'AWARE** project is to provide trainers with the tools to fully fulfil their educational role in relation to digital citizenship among young people through:

- Developing of digital citizenship pedagogy among trainers working with youth audiences
- Encouraging young people to define good and bad digital practices for themselves
- Awaken critical thinking about digital media in a fun and playful way

Developing resources for trainers

The results of the project will be:

- Educational resources (Handbook and Training kit)
- An open access multilingual e-learning hub
